

WAS4729QB

Low On Resistance (0.75Ω) Dual SPDT Analog Switch with Negative Swing Audio Capability

[Http://www.sh-willsemi.com](http://www.sh-willsemi.com)

Descriptions

The WAS4729QB is a high performance, dual Single Pole Double Throw (SPDT) analog switch with negative swing audio capability that features ultra-low Ron of 0.75Ω (typical) at 3.6V VCC. The WAS4729QB operates over a wide VCC range of 2.3V to 5.5V and is designed for break-before-make operation. The select input is TTL-level compatible.

WAS4729QB is also featured with smart circuitry to minimize VCC leakage current even when the control voltage is lower than VCC supply voltage. This feature suits mobile handset applications by allowing direct interface with baseband processor general-purpose IO with minimal battery consumption. In other word, there is no need of additional device to shift control level to be the same as that of VCC in real application.

The WAS4729QB is available in QFN1418-10L package. Standard product is Pb-Free and halogen-Free.

Note: WAS4729 switches feature negative signal capability that allows signals below ground to pass through without distortion. These analog switches operate from a signal +2.3V to 5.5V supply. The input/output signal swing of device is dependent of the supply voltage V_+ : the device pass signals as high as V_+ and as low as $V_+ - 6.5$, including signals below ground with minimal distortion. Table 1 shows the input/output signal swing the user can get with different supply voltages.

SUPPLY VOLTAGE, V_+	Min. ($V_{NC}, V_{NO}, V_{COM} = V_+ - 6.5V$)	Max. ($V_{NC}, V_{NO}, V_{COM} = V_+$)
5.5V	-1.0 V	5.5 V
5.0V	-1.5 V	5.0 V
4.5V	-2.0 V	4.5 V

3.5V	-3.0 V	3.5 V
3.0V	-3.5 V	3.0 V
